

Soil constraints and nutrition with Dr Cass Scheffe

Free Webinar

Landcare
Victoria Inc.

This webinar will explore how Wimmera farmers can optimise productivity through addressing soil constraints and maintaining system fertility. It will assist farms to position their business for a low carbon emission future and highlight the relationship between emissions and productivity.

Why should farmers attend?

Unlock the full potential of your paddocks by understanding and managing soil constraints and fertility. This webinar will equip farmers with practical strategies to improve soil health, boost crop performance, and make more informed input decisions, leading to optimised yields and improved emissions intensity.

Meet the Presenter

Dr Cass Scheffe is a highly qualified soil scientist and leading expert in farm emissions. Cass has been working with farmers across Australia to understand their emissions profile and implement practice change that boosts productivity while reducing emissions.

Topics to be discussed:

- Identifying and addressing common constraints in Wimmera soils
- Maintaining system fertility - not just nitrogen
- Maintaining soil carbon
- Soil moisture for the season ahead

Date: Wednesday 18th February

Time: 7.30 – 8.30pm

Cost: FREE

RSVP: Monday 16th February
